

Academy's science week proves a blast for pupils

READY TO LAUNCH: Milkyesha Barnes and Chelsea White, both aged 13. Ref:112845-5

SCIENCE fever has gripped a Langley school with rockets flying 400ft.

Pupils at the Langley Academy, which specialises in science, have been celebrating National Science and Engineering Week.

There have been shows and hands-on activities.

Children at the Langley Road school have worked in their tutor groups to build their own planet as part of the Langley Academy solar system and produced video presentations using the national theme of 'our world in motion'.

Shows included science tricks, the magic of bubbles, the earth in space and the application of light and colour.

Year eight students had the opportunity to build and launch their own rockets as part of the Starchaser rocket factory, some of which flew 400ft.
